DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 20, 25, and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Hanazawa et al. (5,590,364).

As recited in claims 20, 25, and 26 Hanazawa et al. disclose a signal processing apparatus and method or computer method, comprising: a signal processing block (14) that is configured responsive to an operating clock for carrying out signal processing by executing a program; a program selecting block (15) that is configured for selecting a program to be executed by the signal processing block and for setting the selected program to the signal processing block (column 4, lines 5-14); a control data generating block (11) that is configured on the basis of the set program for generating control data indicative of a program part not valid or effective in the set program; and a clock control block that is configured on the basis of the control data for stopping a supply of the operating clock to the signal processing block in a given duration corresponding to the program part indicated by the control data (abstract and column 4, lines 26-54).

Allowable Subject Matter

1. Claims 18, 19, and 21-24, are allowed.

2. The following is an examiner's statement of reasons for allowance:

The claims are allowed, because the prior art fails to teach or disclose a tone signal generating apparatus or process, wherein tone signals are provided for a plurality of channels and control data is configured to specify the number of channels to be used, wherein a clock control is configured on the basis of control data to stop supplying of the operating clock to the tone generator in a given duration in which the specified number of sounding channels are not used, wherein sounding start for allocating tone signals corresponds to start instruction to the number of sounding channels determined on the basis of control data. The prior art fails to provide the same, wherein volume level of each channel is detected, and control data is configured on the basis of the detected volume level of each sounding channel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following references are related to the present invention in that the references relate to signal processing.
